1 PROBLEM

Let $B : \mathbb{R} \times \mathbb{R} \rightarrow \mathbb{R}$ be the function $B(a, b) = ab$.

Which of the following is true-

- 1) B is a linear transformation
- 2) B is a positive definite bilinear form
- 3) B is symmetric but not positive definite
- 4) B neither linear nor bilinear

2 SOLUTION

Options	Explanation
B is a linear transformation	<p>Let the transformation be $B : \mathbb{R} \times \mathbb{R} \rightarrow \mathbb{R}$ such that,</p> $B(\mathbf{x}) = xy \text{ where } \mathbf{x} = \begin{pmatrix} x \\ y \end{pmatrix}$ <p>Now $B(\mathbf{e}) = ab$ where $\mathbf{e} = \begin{pmatrix} a \\ b \end{pmatrix}$</p> <p>Hence, $B(c\mathbf{e}) = c^2 B(\mathbf{e})$</p> <p>Hence B is not a linear transformation.</p> <p>Hence incorrect.</p>
B is a positive definite bilinear form Bilinear Form Symmetric Positive Definite	<p>$f : \mathbb{V} \times \mathbb{V} \rightarrow \mathbb{F}$ where \mathbb{V} is a vector space and \mathbb{F} is a field</p> <p>f is a bilinear if the following holds true -</p> <ol style="list-style-type: none"> 1. $f(c\alpha_1 + \alpha_2, \beta) = cf(\alpha_1, \beta) + f(\alpha_2, \beta)$ 2. $f(\alpha_1, c\beta_1 + \beta_2) = cf(\alpha_1, \beta_1) + f(\alpha_1, \beta_2)$ <p>Now, $B(ca_1 + a_2, b) = (ca_1 + a_2)b = cB(a_1, b) + B(a_2, b)$</p> <p>And, $B(a_1, cb_1 + b_2) = a_1(cb_1 + b_2) = cB(a_1, b_1) + B(a_1, b_2)$</p> <p>Hence B is a bilinear form.</p> <p>Again a bilinear form f is symmetric if $f(\alpha, \beta) = f(\beta, \alpha)$</p> <p>Here, $B(a, b) = ab = ba = B(b, a)$ hence B is symmetric.</p> <p>A symmetric bilinear f is positive definite if</p> $f(\alpha, \alpha) > 0 \quad \forall \alpha \neq 0$ <p>Here, $B(a, a) = a^2 > 0 \quad \forall a \neq 0$</p> <p>Conclusion: B is symmetric and positive definite bilinear form.</p> <p>Hence Correct.</p>
B is symmetric but not positive definite	<p>From previous proof it is obvious that</p> <p>B is both symmetric as well as positive definite</p> <p>Hence incorrect</p>
B neither linear nor bilinear	<p>From previous proofs it is obvious that</p> <p>B is bilinear.</p> <p>Hence incorrect.</p>
Result	B is symmetric and positive definite bilinear form
